

Benefits of a Hikvision Integration

Budgets are tight, and biometric access control still sounds like an enterprise-only line item to many customers. Whether it is a school district covering a handful of entrances, a warehouse securing a loading dock, or a retailer protecting a stockroom, the pressure is the same: add facial recognition without adding a second system to license, support, and train a team on.

That's where an ICT and Hikvision integration comes in.

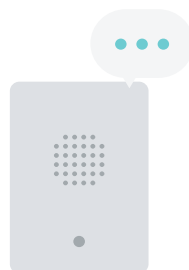

A cost-effective face terminal that rides on your existing Protege GX licence, so the terminal identifies the user and Protege GX still makes every access decision.

Key Features

Streamlined Operations

Manage users and sync facial recognition credentials directly within Protege GX. No duplicate records, no separate console.

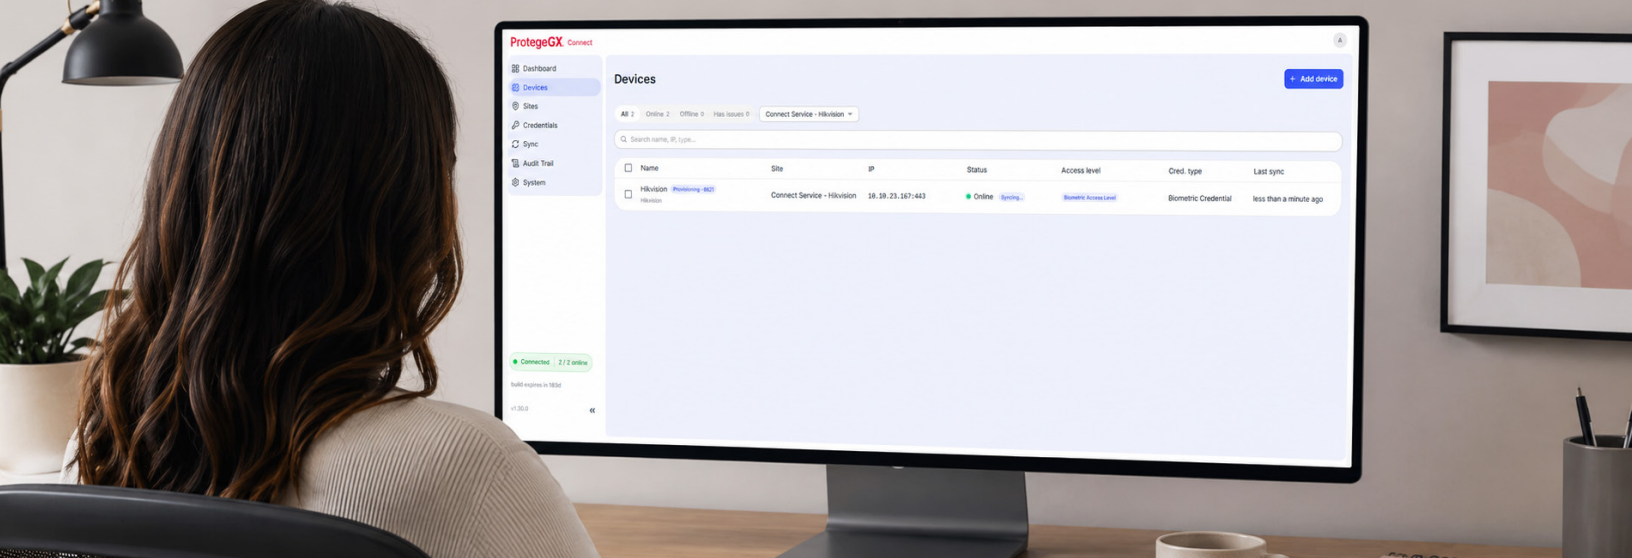

Improved User Experience

Authenticate with a face alone for convenience, or pair with a card reader for dual credentials on doors that need more.

Enhanced Security

A cost-effective way to bring biometric authentication to more doors, while Protege GX still makes the access call.

Supported Features

- > Enroll users and sync their facial recognition credentials directly in Protege GX
- > Supports dual authentication using ICT credentials and the Hikvision Pro Face Access Terminal
- > Facial recognition, PIN, or both together on the same door
- > Optional consent tracking before a photo is synchronized to the terminal

Who we are

We believe in the confidence and peace of mind that comes from a feeling of true security.

“ My vision is to make access, intrusion, and automation easy for our customers. A lot of security products are complicated and only offer one service. Our driving idea is that you create success – and value – when you combine them into a unified solution. - **Hayden Burr, Founder & Chief Innovation Officer, ICT.** ”

Integrated Control Technology (ICT) is an award-winning global manufacturer of security solutions. For more than 20 years, ICT has led the way with their unified systems for access control, intrusion detection, and building automation.
