Made Seamless.

ICTeSecurity.

A large crowd of people is silhouetted against a bright blue background of stage lights. The lights create a hazy, atmospheric effect with beams of light cutting through the air. The crowd is dense and occupies the lower half of the frame, looking towards the upper half where the lights are most intense.

Challenge

State of the art facilities and state of the art technology go hand in hand. But what good is having all the top of the range tools if they don't work with each other? Multiple disparate systems not only lack continuity, they are both inefficient and uneconomical.

The Colorado Convention Center is a stunning 2.2 million square feet (200,000 m²) facility in the heart of downtown Denver, and home to more than 400 events a year ranging from local community graduation ceremonies to the Great American Beer Festival. One of the busiest mid-sized concert venues in Metro Denver, the Center has also hosted acts such as Elton John and Bruce Springsteen, and an evening with former president Bill Clinton.

High profile guests, require a high level of security. When the Center approached ICT in 2012 they had a system that wasn't fully integrated. Originally fitted with traditional lock and key doors when the venue first opened, these had been replaced with SALTO wireless door locks to provide a keyless access solution. The level of functionality between SALTO and their existing access control system however, was somewhat lacking. While the two systems worked well on their own, together they did not provide an efficient or cohesive solution and operators were having to perform actions in both systems to get things done.

Colorado Convention Center

Solution

A key aspect of the ICT philosophy is the ability to integrate with third party systems, enabling customers to maximize the infrastructure and IT investments they already have available on site while adding value to their existing technology.

With **584,000 square feet (54,300 m²)** of exhibit space, **63 meeting rooms** covering **100,000 square feet (9,300 m²)**, **85,000 square feet (7,900 m²)** of ballroom space, and the spectacular **5,000 seat Bellco Theatre**, there is no doubt the Convention Center is a huge site. The large number of doors and visitors needing access to certain areas and levels, means controlling security and who is entitled to go where and when is crucial.

In just over three months, ICT took the entire feature set of SALTO and integrated it with Protege GX to provide a single comprehensive access control solution.

The seamless high level integration enables the Colorado Convention Center to manage day to day tasks including access rights, door configuration, events, and alarms, all from within the Protege interface.

The system provides an accurate, searchable audit trail of all events (both online and offline); enables operators to view archived footage from all related cameras, including those for offline locks; and allows them to monitor and control SALTO wireless doors in real time.

Products

Protege GX

Protege GX is an enterprise level integrated access control, intrusion detection, and building automation solution with a feature set that is easy to operate, simple to integrate, and effortless to extend. The modular design and scalable licensing model makes Protege GX suitable for everyone – from small single door systems right through to large multi-national corporations.

Protege DIN Rail 8 Output Expander

Featuring 8 high current Form C relays, the Output Expander is used to extend the number of outputs on the system and provide flexible and structured control of lighting and automation systems.

These are only some of the products used.
